

Explanation of DataSets and How it would solve problem

The data set used includes the following:

1. **Crime statistics 2017:** gotten from the *National Bureau Of Statistics*. This is an Excel document that has the crime records in states in Nigeria for the year 2017. With the following specifications: ***Offences against persons, Offences against property, Offences against lawful authority & the Total crime record of the state.***
2. <https://www.distancelatlong.com/distancecalculator/country/nigeria> This site contains the states in Nigeria and their Latitude and Longitude in order to compare with the FourSquare Location Data
3. FourSquare Location Search: Searching for specified police Stations in Nigeria: Of course this search would majorly bring the well-known ones which would be a pointer to the safety measures in those specified Locations.

This Above data would be used to solve the Problem such that it would be a pointer to crime situations in the country and how they accentuated in specified states of the country to ensure, good decision making for business personnel's, to travelers, even to the security measures of the country to implement counter measures against crimes in Nigeria.
